302-245	5/8" O.D.	16
302-250	3/4" O.D.	19
302-335	1/2" O.D.	13
302-355	3/4" O.D.	19

Nozzles longer than standard available.

- An economical unit for medium and small production filling.
- Fills containers ranging in size to 1 gallon.
- Handles Free-flowing and low viscosity liquids of all types
- Uniform fill improves package appearance.
- Unskilled operators keep operating costs at a minimum.
- Ruggedly built for years of lasting satisfaction.
- Quality workmanship for accurate and dependable operation.

The filler will handle from 3 to 30 containers per minute depending on the product, size of container and nozzle size required. The supply for the siphon filler can be maintained by gravity feed from a raised storage tank or it can be pumped into the filler tank from a low container. Spouts have nozzle assemblies so that they are also interchangeable by substituting different size nozzles on the base of the spouts. The ease with which spouts can be interchanged is a welcome feature on the CE-500 Siphon Fillers. It permits filling containers of various sizes by simply removing a pin and replacing with another spout
