

CE-FIL-OF11

In-Line Automatic Pressure Overflow Filler

- Variable speed control for conveyor
- Pump speed controlled by frequency drive
- 20 Gallon stainless steel covered overflow tank
- Tool-less nozzle mount adjustment (0 to 4 inches)
- Automatic tool-less neck guides included as standard
- 96 gallon per minute centrifugal pump
- Hand wheel bottle height adjustment. (1 to 16 inches high)
- Expandable to 16 nozzles to increase speed

The Automatic Overflow Fill-It is a unique piece of packaging equipment that fills every bottle to the same level, regardless of the interior volume of the individual containers. This equipment fills containers using a nozzle that overflows product back into a holding tank once the liquid reaches desired level in the container. The Fill-It uses indexing and a PLC to allow for continuous bottle filling without the need of an operator for each cycle. Standard with 6 nozzles, expandable up to 16 nozzles.
